* - Beginning with the 2021 estimates, the OEWS program used a new model-based estimation methodology, called MB3. More information is available at Technical Notes, referenced below.

1 - The percentile wage shows the percentage of workers that earn less than a given wage and the percentage that earn more.

The hourly wage estimates in 2023* indicate that:

10% of employees earn less than \$15.22 per hour; therefore the remaining 90% earn more than \$15.22 per hour.

25% earn less than \$18.27; 75% earn more than \$18.27.

50% earn less than \$23.86; 50% earn more than \$23.86 (The 50th percentile is also the Median).

75% earn less than \$35.48; 25% earn more than \$35.48.

90% earn less than \$49.50; 10% earn more than \$49.50.

2 - The mean wage is an average wage. The mean wage estimate is calculated by summing the wages of all the employees and then dividing the total wages by the number of employees.

Source - Vermont Department of Labor, Economic & Labor Market Information, Occupational Employment and Wage Survey (OEWS) program in cooperation with the U.S. Bureau of Labor Statistics - released March 2024. Note: Prior to March 2021, this program was known as Occupational Employment Survey (OES).

The OEWS survey is a semiannual survey measuring occupational employment and wage rates for wage and salary workers in nonfarm establishments in Vermont. Each year, surveys are mailed to establishments in May and November. Estimates for 2023 are based on responses from establishments surveyed over a 3-year period: May 2023, November 2022, May 2022, November 2021, May 2021, and November 2020. Wages reported prior to May 2023 are updated to May 2023 using the Bureau of Labor Statistics Employment Cost Index (ECI).

For more information, see Technical Notes for OEWS Estimates at https://stats.bls.gov/oes/current/oes_tec.htm.
