INTRODUCTION

Vermont is a mostly rural state located strategically between the large metropolitan areas of Boston, New York, and Montreal. We attract visitors throughout the year seeking our natural charm. The Vermont economy depends on a diversified mix of Manufacturing, Health Care, Tourism and Public sector related enterprises. Agriculture remains an important component of our economy and cultural image, but its relative impact is declining.

The recession in 2001 caused Vermont's unemployment to rise but it has remained well below the national rate. In 2004, job growth rebounded in the state and the unemployment rate fell eight tenths of a percentage point to 3.7 percent. Between 2004 and 2005, jobs continued to increase, but at a much slower rate (0.7 percent). Unemployment dropped another two-tenths of a percent to 3.5 for the year (2005).

Chittenden County, in the northwestern section, is the foundation for the state's economy and provides nearly one third of the jobs in Vermont. Burlington is the largest city, offering numerous educational and cultural attractions as well as a comprehensive commercial network. Located on the shores of Lake Champlain, the city provides easy access to a wide range of recreational activities. The international airport in South Burlington provides a convenient gateway to distant locations for business or recreation.

Burlington is the core of the state's only Metropolitan Statistical Area, which extends into parts of Franklin, Grand Isle and Addison Counties. These counties are also agricultural in nature, which sometimes causes conflict over land use restrictions.

Southern Vermont has also been influenced by a debate over the trade-off between economic growth and preservation of the rural landscape. Easy access from northeastern urban centers has put pressure on the region for second home development. In addition, resorts along Route 100 have strained to expand and provide self-contained winter recreation facilities. The area along the Connecticut River has close ties to neighboring New Hampshire communities. The northern part of Windsor County benefits from its proximity to Hanover, New Hampshire, which is home to Dartmouth College and the Dartmouth Hitchcock Medical Center.

Bennington County, in the southwestern corner of the state, provides a wide range of recreation and tourist activities and is popular with visitors from adjoining New York State. The county continues to lose manufacturing jobs at a faster rate than the state. However, that rate has dropped since the 2002-2003 time period. NSK Steering Systems and Mack Molding continue to employ significant numbers of people, as does the Southwestern Vermont Medical Center and Orvis.

While Central Vermont is well known because of the capital city, Montpelier, the region also contains a diversified economy with an impressive cultural heritage. Granite quarries provide stone for monuments and construction all over the world. Workers in granite "sheds" pass on a tradition of craftsmanship that turns the huge slabs into individual monuments and works of art. The granite industry is centered in Barre where Rock of Ages Corporation has operated for over 100 years. National Life Insurance Company, with headquarters in Montpelier, has an equally impressive tradition in the insurance and financial services sector.

Lamoille County is known for two main resorts: Stowe and Smuggler's Notch. The strong connection to recreation activities produces a high concentration of service industry jobs. Stowe has embarked on a 10 year expansion project that will add high end condominiums, town houses, restaurants, parking garage, spa, and a new golf course. As a result, higher paying construction jobs are readily available.

The Northeast Kingdom, aptly named by Senator George Aiken, contains some of the most remote areas in the state. Backed up against the Canadian border on a high plateau between the Green and White Mountains, it is one of the last remnants of a rural, undeveloped New England. It has been said that the Kingdom's blend of Technicolor scenery and eccentric characters make it a little

like Oz. The forests provide income for loggers and are a major resource for furniture manufacturing, which is a critical part of the economy. Residents of the three counties report income levels among the lowest in the state, reflected in their high poverty rates.

POPULATION

Population growth in Vermont remains modest since Census 2000. The statewide growth rate of 2.1% from 2000 to 2004 is still about half of the national growth rate for that time period. Grand Isle County and Lamoille County are the two fastest growing counties in the state. Grand Isle, with a population of 7,490 grew 10%, due in large part by its proximity to Burlington, the state's largest city and employment center. This is true of Franklin County as well, which has an above average growth rate. Lamoille County with a population of 24,418 showed a 5% increase in population for the time period. Over 40% of that county's population live in the towns of Morristown and Stowe.

While the northwestern counties have experienced above average population growth, the opposite is true in the south. Bennington County, in southern Vermont, is the only county to show a loss in population since the 2000 Census. However, Windham, Windsor, and Rutland counties all remain almost static when it comes to population growth (see table 1).

The largest towns and cities are

located in Chittenden County. Burlington is the state's largest city, although its population is down slightly from 2003. Essex Town has the second largest population in the state. Colchester, and South Burlington are also large population centers, while Rutland City remains the fourth largest community in the state.

Bennington, while still one of Vermont's largest communities, continues to decline in population. In Central Vermont, Barre City and Montpelier have lost population since 2000, but many towns in Washington County have grown, including Barre Town, Berlin, East Montpelier, and Middlesex. In Lamoille County, Stowe, Morristown, Wolcott, and Hyde Park show the most growth during that time period.

Orleans, Essex, and Caledonia counties, which comprise the Northeast Kingdom, are all growing at faster rates than the state's. The region remains sparsely populated, with the largest towns being St. Johnsbury, Lyndon, and Newport City. Essex County is the least populated with 6,654 residents. Many of the towns in this county are very small; Warren Gore, Granby and Ferdinand to name a few. (see Table 6)

Vermont's minority population remains small, but it is growing faster than the state's average. Much of the minority population is located in Chittenden County, with Asian and Pacific Islander representing the largest ethnic group, followed by Blacks. Both

Franklin and Chittenden counties have a significant number of aboriginal peoples.

Probably the most dramatic population statistics involve the aging of Vermont. Soon, the state will be the oldest in the nation, according to population projections. About 40 percent of Vermonters were younger than 34 years old in 2004, compared to a national average of almost 50 percent. More Vermonters are over 65 than the national average. The aging of our state, combined with an out migration of young people will continue to challenge our workforce and our healthcare systems. Chittenden County has the lowest percentage of people over the age of 55, while almost a third of the populations of Bennington and Windsor counties are 55 or older (see table 16). On the other end of the spectrum, Franklin County has the highest concentration (just over 6 percent) of children 4 years or under, however that percentage dropped since 2003. Their percentage of school age children (5-19 year olds) also dropped, but is still the largest in Vermont at almost 22 percent.

Population projections (see table 17) show a continued slow growth rate for the state, at roughly half that of the nation. Grand Isle, Franklin, and Lamoille counties are projected to remain the fastest growing counties. As Grand Isle and Lamoille counties' growth rate diminishes slightly by the year 2020, Franklin County's growth remains strong. Their current youthful numbers support this

projections. Population growth in Chittenden County is projected to slow down, and the southern counties will remain the slowest growing in the state.

ECONOMIC TRENDS

The number of jobs in Vermont grew in 2004 for the first time in three years. The 1.4 percent increase represented a gain of 4,203 jobs, raising the total average employment to 298,491. The rate slowed to 0.7% for 2005.

The goods producing sectors in private industry showed an overall increase in jobs, led by construction at 8.4%. However, both durable and non-durable goods manufacturing continued to show declines. Over 2500 jobs were added in the service-providing sector. Services represent more than 60 percent of all the jobs in Vermont. Almost half of those new jobs were in health care and social assistance. Compared to 2000 employment figures, five counties have shown losses, with Essex County's employment dropping by over 16 percent during that time period. Bennington and Windham both had significant job loss; Bennington's employment dropped by over 1,200 and Windham's by just over 1,000. (See table 1)

Since 2003 job loss has slowed, with Bennington's employment dropping by 0.7 percent in 2004 and Windham's actually going up by 0.4 percent. The weak manufacturing sector continued to affect both counties. Bennington County showed a significant loss

of jobs in government in 2004, with a decrease of almost 10 percent.

Eight of Vermont's 14 counties showed job growth since 2000, with Grand Isle growing the fastest at almost 17 percent. Because of the size of Grand Isle's employment base, however this only represents 169 jobs. Franklin County added the most jobs to its economy, followed by Orleans. Vermont's employment is concentrated in three counties: Chittenden, Washington, and Rutland. Combined, these three counties account for more than 50 percent of total employment in Vermont. Chittenden County continues to dominate the state's economy. In Chittenden County layoffs continue in manufacturing, while retail, health care, and accommodation and food services have all added jobs. Washington County showed a loss of jobs in finance and insurance, and gains in healthcare and construction, with a slight increase in non-durable manufacturing jobs.

Rutland County's employment grew at a faster rate than Chittenden and Washington and added over 700 jobs. Manufacturing there grew slightly, but transportation and warehousing grew at a whopping 31.5 percent rate from 2003, adding 179 jobs to the county's economy.

2005 unemployment rates varied across the state's counties. Orleans County, which also has the highest percentage of people living below poverty level, had the highest unemployment rate of 5

percent. Windsor and Chittenden consistently have the lowest unemployment rates. Although unemployment rates across the state have generally decreased since 2004, Grand Isle shows an increase from 4.7 to 4.9, in spite of its relatively high percentage of job growth.

The average wage in Vermont increased by 3.7 percent in 2004, slightly more than the 2003 increase. Wages continue to be higher in Chittenden County where annual wage was 15 percent higher than the state's average of \$33,276. Wages ranged from a high of \$38,433 in Chittenden County to a low of \$24,299 in Grand Isle. Washington County's average wage rose above the state's 2004. Average wage is influenced by many factors, such as the mix of industries and occupations in an area. Part-time and seasonal jobs generally produce a lower annual average, although they may pay a competitive hourly wage.

In the year 2000, Vermont ranked 28th in the nation for Per Capita Income (PCI). Since then, the state has moved up to 22nd, with a PCI of \$31,780 compared to the nations of \$33,050. The District of Columbia has the highest Per Capita Income (\$51,155) and regionally, New England leads the nation (\$40,260). Per Capita Income is total personal income divided by total resident population. It is a broader measure of financial well being than wages because it includes various non-wage items, such as dividends, rents, and government transfers

payments. Income is based on the resident population, while the average wage is reported on the basis of the location of the employer paying the wages.

Income by town is available based on Vermont Department of Taxes information (see tables 2-15).

Data is based on income tax returns and it is influenced by the mix of single and multiple income households. Sixteen towns in six counties had median adjusted income of over \$40,000 in 2004. Seven of those towns are in Chittenden County, where both Underhill and Essex had median adjusted incomes of over \$50,000.

The combination of large population and relatively high-income levels creates a substantial tax liability for Chittenden County.

Just over a third of the state's personal income taxes come from residents of Chittenden County. The sales and use tax was almost as high, and a quarter of the rooms and meals taxes for the state come from the county (see table 34).

Although Vermont feels some pressure from development, particularly in the northwestern part of the state, it has maintained its rural nature and a substantial agricultural base. Latest county statistics are from the 2002 Census of Agriculture (see table 32). Addison and Franklin Counties have the most farm acreage and represent about half of the state value of products sold. Dairy farming dominates the

agriculture of Vermont and contributes to its non-durable goods manufacturing sector.

Forestry continues to play a role in the economy of each of the 14 counties. The 2004 softwood harvest increased from 2003, while the hardwood harvest decreased slightly. While Windsor County leads the state in hardwoods, Caledonia harvests the most softwood (see table 33).

HOUSING

Although the number of vacation homes sold between 2000 and 2004 declined, the median price of these units soared. Statewide, the median price of a vacation home increased by almost 78 percent; Chittenden and Lamoille Counties showed increases of well over 150 percent. In Lamoille County the median price of a second home rose from \$122,750 in the year 2000, to \$348,000 in 2005, an increase of 183 percent. The rapid growth surrounding the ski community of Stowe has had a significant effect on these figures.

Year round housing prices also rose dramatically with the statewide increase being 55 percent. The median price of a year-round home was \$119,000 in 2000 and \$185,000 in 2005. This includes all types of single-family dwellings, including mobile homes. The highest prices were found in Chittenden County where the median price of a house was \$230,00, however the fastest growing prices were found in Washington County, where the

median price of a year-round dwelling rose by almost 73 percent. Addison, Grand Isle, Lamoille, Orange, and Windham all showed prices increasing by over 60 percent.

See <http://www.housingdata.org> for detailed housing data for Vermont.

Local property taxes fund municipal expenses, road maintenance, and local education. A statewide property tax is used to supplement the local property tax for education. For the purposes of education funding, all real property is classified as either homestead or nonresidential. A statewide education tax is imposed on these two classes of property at different rates. The homestead education tax rate in each municipality depends upon the local per pupil spending. Both the homestead and nonresidential education tax rates are adjusted by the local common level of appraisal of the property. Tables 2-15 show the latest homestead tax rates for towns in Vermont. An explanation of how the school tax rates are set is available at: <http://www.state.vt.us/tax/pvrfaq.shtml>

EDUCATION

Vermont school enrollment has been declining since 1997. 1995 statistics show an enrollment of 98,361 which dropped to 96,636 for FY06. Since 1997, public school enrollment has declined by 9.1 percent. See table 36 for county information about Vermont's high school population. Drop out rates vary widely between

schools, from a 0.0 percent rate for St Johnsbury Academy to a 9.7 percent rate for Winooski. The state average for 3 years is 2.8 percent. The National Governors' Association is working to standardize the way drop out rates are measured because currently there is a great discrepancy. Both national and statewide drop out rates are most likely understated and will be much higher when consistency in measurement is achieved. The Center for Rural Studies, in cooperation with the Vermont Department of Education, provides a variety of valuable information, including performance measures at <http://crs.uvm.edu/schlprt/>. Information is available for all public schools by town.

Eighth grade Vermont students performed well in one national measure of competency in science. The National Assessment of Educational Progress (NAEP) assesses

science in two major dimensions.

The average score for eighth-grade Vermonters was 162 compared to the national average of 147. For more information about national assessments go to: <http://www.nces.gov>.

Table 37 lists the public high schools by county and shows their level of achievement for math, reading and writing. The only level that appears problematic for Vermont schools is "Math Problem Solving." Compared to FY 2004 data, scores in that area have not improved and in several cases have gotten lower. Student performance varies from year to year and is only one measure of the effectiveness of the educational system.

Higher education is well represented in Vermont; in fact the state has more colleges per capita than any other. The University of

Vermont is located in Burlington, and includes a teaching hospital for students pursuing careers in medicine. The Vermont State College system, which includes Castleton State College, Community College of Vermont, Johnson State College, Lyndon State College, and Vermont Technical College, offers a wide variety of post-secondary educational opportunities. Other institutions include Middlebury College, Bennington College, Norwich University, the College of St. Joseph, St. Michael's College, Landmark College and others. The Vermont Student Assistance Corporation (VSAC) is a public nonprofit agency that provides information about higher education and assists with financial aid for students. Their website also includes assessments, information about careers, and links to state and national sources.

Visit VSAC at <http://www.vsac.org/>

NOTE: Assessments are grade 10.
See the DOE web site for other grades and additional information at www.state.vt.us/educ/index.htm

GLOSSARY

ADJUSTED GROSS INCOME (AGI) is the value an individual reports on their state income tax. The Vermont Department of Taxes provides the data reported in this publication.

* As noted by the Tax Department: This data is provided for historical continuity with previous tax reports. Median AGI for all tax returns is an inappropriate measure of central tendency because it is so dependent on the mix of single and dual incomes within a town.

Determination of median AGI for all tax returns by town was required by VSA Title 16, Section 3480 in 1981 to assist in computation of aid to education. In 1987 this statute section was amended to specify determination of average AGI per exemption. The entire section was repealed in 1997 as part of Act 60.

AGE COHORT is an age grouping that is an aggregate of sequential years of age. For example, one group might be all persons between the ages 5-14.

ANNUAL AVERAGE WAGE is the average wage paid by all firms covered under Vermont's unemployment compensation law. The average wage is computed by dividing the total wages paid during the year by the average number of employees across all occupations.

COVERED EMPLOYMENT in this publication includes the employment of both public and private employers covered by the unemployment compensation law. The data is gathered from reports submitted by employers each quarter and is aggregated into industries as defined by the 2002 North American Industry Classification System (NAICS). The major groups of employers excluded from coverage are most agricultural production firms and the self-employed.

EDUCATION

ASSESSMENTS: Established by the State Board of Education in 1996, the Vermont Comprehensive Assessment System (CAS) evaluates student performance in the state's schools, based on Vermont's Framework of Standards and Learning Opportunities, with the goal of improving teaching and learning.

COMPLETION RATE (longitudinal) is calculated by dividing the total number of graduates in a particular class by the cumulative number of dropouts over the four-year period when the specified class would have attended high school. This rate attempts to estimate the graduation rate for a single class of students when actual cohort data are unavailable. The statewide longitudinal completion rate for the class of 2002 is 82%. This completion rate has been reported previously from Vermont's Department of Education, but this is the first year it has been included in this report.

* It is important to note that the longitudinal completion rate has real limitations. It cannot account for students who may dropout and re-enroll in either the same school or another the following year. The rate includes both graduates and dropouts who may not have been part of the original cohort that started in the school in the ninth grade. However, until a statewide student tracking system is in place, the longitudinal completion rate provides the best information available on high school completion.

ENROLLMENT is an annual head count as of October 1st. The enrollment report is organized by school, grade, ethnicity and gender break down.

DROP OUT RATE is the percentage of students who leave high school during the school year and the preceding summer. Enrollment figures used in calculating this rate have been adjusted for transfers and deaths.

GLOSSARY - continued

EFFECTIVE HOMESTEAD TAX RATE: The tax rate levied on residential (homestead) property is adjusted upward if the residents of that school district decide to spend more than the “base education payment.” The base education payment was \$6,800 per pupil for tax year 2004. Here’s an example of how the rate is adjusted.

Say your local school budget provided for spending of \$7,820 per pupil. The homestead tax rate of \$1.05 was adjusted upward before the common level of appraisal adjustment was applied. It will be higher in proportion to the amount your voters decided to spend over \$6,800 per pupil. In this example, the adjustment was:
 $\$7,820/\$6,800 = 1.15$

EMPLOYMENT in this publication is measured by Covered Employment and Labor Force. Covered Employment is based upon where the job is located. Labor Force is based upon where the worker resides. See Covered Employment and Labor Force for further information.

HOME SALES are the number of homes sold in Vermont by county. This includes all single family homes, condos and mobile homes sold, with and without land. The home value reflects the median price of homes sold in that county.

LABOR FORCE data measures the labor force status of the area’s residents who are 16 years of age or older. The residents may work, look for work, or be unemployed from firms in areas other than where they reside. The estimates include agricultural workers, unpaid family members and the self-employed.

MEDIAN is a statistical term. Data is put in numeral order. The median is the middle term. Fifty percent of the data fall above the median and fifty percent fall below the median.

PER CAPITA INCOME data for the state and counties is based on estimates from the Bureau of Economic Analysis of the U.S. Department of Commerce.
