Short Term Employment Projections 2018 - 2020

Background

Short term employment projections are produced annually using historical and current industry employment and occupational survey data to project how employment will change over a two-year period. The projection results reflect short term business cycle activity, such as periods of recession or rapid growth. Consequently, the short term employment projections are helpful for those looking for immediate employment, whether temporary, part-time or full-time.

In contrast, Vermont's long term (ten-year) employment projections are designed to assist the educational community, workforce development specialists and individuals planning for the future. The long term occupational employment projections can be used to identify occupations that will show stability, growth and good incomes over the long run. The methods used to produce long term projections ignore the peaks and valleys of business cycles and focus on the fundamental elements that affect the demand for a particular occupation.

Short Term Employment Projections Tables:

Occupations with the Most Openings

Fastest Growing Occupations

Industry Projections

For more Vermont information, including projections, go to Occupations or Industries at www.vtLmi.info.

Methods

The 2018-2020 short term employment projections are based on Vermont historical data from 1990 through the first quarter of 2018. The primary data sources used were the Quarterly Census of Employment and Wages and the Occupational Employment Statistics survey.

The results of the 2018–2020 occupational employment projections provide a general guide for the direction and relative strength of occupational demand but are not intended to indicate absolute levels of employment in an occupation.

New Separations Methodology

The Bureau of Labor Statistics (BLS) has implemented a new methodology to measure occupational separations starting with the 2017-2019 projections. The old Replacement methodology, developed in the early 1990s, reflected the once-traditional career path of workers who stayed in the same industry or occupation until retirement. The new Separations methodology includes a broader range of reasons for exiting the occupation, including promotions, changing careers, and completing a retraining program. The purpose of both methods remains the same: to provide estimates of workers who permanently leave their occupation and need to be replaced by new workers. Note that this still does not include openings due to a worker leaving a job for another job in the same occupation. The other component of job openings, of course, is projected overall growth or decline of employment in each industry that uses that occupation.

For more information about the Separations methodology, visit:
www.bls.gov/emp/ep_separations.htm.

50 Bus Drivers, School or Special Client	1,489	1,498	182	0.3%
 Total, All Occupations	 355,739	 359,071	 40,267	 0.5%

NOTES AND METHODS:

The 2019 short term occupational projections were based on Vermont historical data from 1990 through 2018, 1st quarter. Time series forecasting methods were used to predict employment movements through 1st quarter, 2020. The results provide a general guide for the direction and relative strength of occupational demand but are not intended to indicate an absolute level of job openings.

* The average annual growth rate using a compounding formula.

NOTES AND METHODS

n Data do not meet disclosure standards

* Growth rates are compound average annual rates

** Total Employment includes suppressed values and does not equal the sum of the disclosed industry line items
NAICS refers to the North American Industry Classification System.
Employment shown in 2018 and 2020 is for first quarter, Jan--Mar.

Last updated March, 2019
